

# Kafko DIY Swimming Pool Features

**A: Certikin Through the wall Wide Angle Skimmer** - a uniquely designed Skimmer that comes in two halves: - Wide angle skimmer throat & skimmer Body. The Skimmer throat is installed through a pre-cut opening in the panel and attached to the main skimmer Body. In the event that the skimmer ever has to be replaced the skimmer is cut in half and a new replacement is installed (there is no permanent fixing to the panel).

**B: Return Inlets** - Two directional Certikin inlet fittings are supplied to enable pool water to flow back into the pool at two different levels.

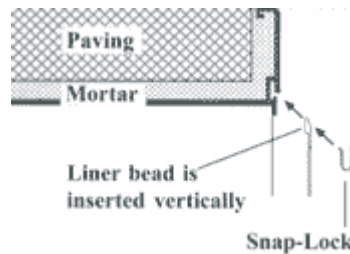

**C: Optional Light Cut-Out(s)** - All Kafko panels can be fitted with a 100 watt Halogen underwater light. The light area is pre-cut and fitted with a niche ready to receive a light housing that you can simply attach yourself.

^ **Kafko Polymer Panels** have top and bottom alignment tabs to help align the wall panels correctly, which also helps to maintain a level wall during construction.

## PATENTED SNAP-LOCK ALUMINIUM COPING

This unique Snap-Lock coping design ensures that the liner is locked in the coping track around the pool and can NEVER pull out from the receptor until the liner clip is removed.

The U.K or U.S.A manufactured liner will clip into the receptor and hang vertical and not horizontally as conventional liner locks do. Aluminium coping also eradicates the unsightly undulations that can appear between conventional liner lock and underside of stone copings.
